

Test Cases for:	SyncMaster.ai	Author:	Saheli Kundu
Date Created:	19/03/26	Last Updated:	Not Applicable
Prerequisites:	1) Chrome/Chromium browser installed 2) Valid GitHub, Notion, Slack accounts 3) Stable Internet connection	Module:	Install & Configure

Test Case #	Test Case Description	Test Procedure	Input Data	Expected Result	Comments
1	Install extension on browser	1. Open Chrome Web Store. 2. Search SyncMaster.ai. 3. Click Add to Chrome.	Browser: Google Chrome (latest)	Extension installed, icon visible in toolbar.	Must work on Chrome and all Chromium-based browsers.
2			Browser: Microsoft Edge (latest)	Extension installed, icon visible in toolbar.	Must also support other Chromium-based browsers like Edge and Brave.
3			Browser: Mozilla Firefox	Installation fails or not supported.	Extension is only supported on Chrome and Chromium-based browsers.
4	Configure platform credentials	1. Open extension settings. 2. Enter all required IDs and tokens. 3. Save.	GitHub User ID: john-doe GitHub Repo ID: syncmaster-repo Notion Token: secret_abc123 Notion DB ID: db_12345 Slack Token: xoxb-token Slack Channel ID: C0123456789	Configuration saved. Status shows 'Setup Complete'.	All fields are required before the system can be used.
5			Notion Token: invalid_token (All other fields valid)	Error: 'Notion API authentication failed.'	Token is validated against Notion API before saving.
6			Slack Channel ID: invalid_channel (All other fields valid)	Error: 'Slack Channel not found.'	Channel ID is validated against Slack API before saving.
7			Slack Channel ID: (empty) (All other fields valid)	Error: 'All fields are required.'	System should not allow partial configuration to be saved.

Test Cases for:	SyncMaster.ai	Author:	Saheli Kundu
Date Created:	19/03/26	Last Updated:	Not Applicable
Prerequisites:	1) Extension installed and configured 2) Microphone available 3) Stable Internet connection	Module:	Meeting Capture & Transcription

Test Case #	Test Case Description	Test Procedure	Input Data	Expected Result	Comments
1	Record live meeting audio	1. Click Start Meeting Capture. 2. Handle microphone permission prompt. 3. Speak during meeting. 4. Click Stop Recording.	Microphone: Granted	Transcript generated and shown in dashboard.	Microphone permission must be requested before recording starts.
2			Microphone: Denied	Error notification displayed. Recording does not start.	System should clearly inform the user when microphone access is denied.
3	Upload pre-recorded audio	1. Click Upload Audio. 2. Select audio file. 3. Submit for processing.	File: meeting.mp3 (valid audio)	Transcript generated and shown in dashboard.	Users can provide pre-recorded audio as an alternative to live recording.
4			File: document.pdf (invalid format)	Error: 'Unsupported file format.'	System should only accept valid audio file formats.
5	Handle network failure during transcription	1. Stop recording. 2. Disconnect network before transcription completes.	Network: Disconnected mid-transcription	Error message displayed. No crash. Data not lost.	System must handle network issues gracefully without losing recorded data.

Test Cases for:	SyncMaster.ai	Author:	Saheli Kundu
Date Created:	19/03/26	Last Updated:	Not Applicable
Prerequisites:	1) Extension configured 2) Valid Notion token and DB ID 3) Transcript available	Module:	Task Extraction & Notion

Test Case #	Test Case Description	Test Procedure	Input Data	Expected Result	Comments
1	Extract tasks from transcript and sync to Notion	1. Generate meeting transcript. 2. System analyzes transcript. 3. Check Notion database for created entries.	Transcript: 'John will complete login module. Sarah will review the UI design.'	Two tasks created in Notion: John - Login module (To-Do), Sarah - UI design (To-Do).	System identifies both the task and the member it is assigned to.
2			Transcript: 'Let us reconvene tomorrow.' (no tasks)	No tasks created in Notion.	System should not create empty or irrelevant entries.
3	Handle duplicate and failed Notion sync	1. Run task extraction. 2. Observe Notion database response.	Duplicate task: 'John - Login module' already exists in Notion	Existing entry updated, no duplicate row created.	System should update existing tasks instead of creating duplicates.
4			Notion Token: invalid_token	Error: 'Notion API authentication failed.'	User must be notified immediately when Notion connection fails.

Test Cases for:	SyncMaster.ai	Author:	Saheli Kundu
Date Created:	19/03/26	Last Updated:	Not Applicable
Prerequisites:	1) Extension configured 2) Valid GitHub token and Repo ID 3) Tasks exist in Notion with status To-Do	Module:	GitHub Commit Tracking

Test Case #	Test Case Description	Test Procedure	Input Data	Expected Result	Comments
1	Track GitHub commits and update task status	1. System checks GitHub repo. 2. Retrieve commits from last 24 hours. 3. Match commit messages with Notion tasks. 4. Update task status if matched.	Commit: 'Completed login module' Notion Task: 'Login module' (To-Do)	Task status updated to Done in Notion.	Status change from To-Do to Done happens automatically on a match.
2			Commit: 'Fixed random bug' (no matching task)	Commit logged for manual review. No Notion update.	Unmatched commits should not be ignored; they need manual follow-up.
3			No commits in last 24 hours	No Notion updates. System completes check without errors.	System should handle zero-commit scenarios without errors.
4	Handle GitHub API failure	1. Set invalid GitHub token. 2. Trigger commit check cycle.	GitHub Token: invalid_token	Error: 'GitHub API access failed.'	User must be notified when GitHub connection fails.

Date Created:	19/03/26	Last Updated:	Not Applicable
Prerequisites:	1) Extension configured 2) Valid Slack token and Channel ID 3) Tasks exist in Notion	Module:	Slack Progress Reporting

Test Case #	Test Case Description	Test Procedure	Input Data	Expected Result	Comments
1	Send daily progress report to Slack	1. Reach the configured report time. 2. System generates summary. 3. Check Slack channel for the report.	Channel ID: C0123456789 Done tasks: 2, Pending: 3, Commits: 2	Report sent with completed tasks, pending tasks, and recent commits.	Report must be clearly formatted and easy to read for all team members.
2			Scheduled time: 6:00 PM	Report received in Slack by 6:01 PM.	Report delivery must not be delayed beyond 1 minute of scheduled time.
3			Slack Token: invalid_token	Error: 'Slack API authentication failed.'	User must be notified when Slack connection fails so they can fix the token.
4	Configure custom report time	1. Open report settings. 2. Set custom report time. 3. Save. 4. Wait for new scheduled time and check Slack.	Custom time: 9:00 AM	Report sent at 9:00 AM as configured.	Each workspace should be able to set its own preferred report time.
